

Project Control Lite For DELTEK VANTAGEPOINT®

By AMR Consulting

#1 – Building out the Employee Hub for Utilization Forecasting

- 1 Add a new tab in Employee Hub to input & store forecast data
- 2 Grid data is searchable & can be downloaded to multiple file formats
- 3 Related grids can be built and fields auto-populated from other Vantagepoint database tables

#2 – Building out the Project Hub for Billing Control & Close-out Purposes

- 4 Add a new tab in Project Hub to input, track & highlight key billing & project close-out data
- 5 Checked boxes can fire email or Vantagepoint alerts to PMs & executives
- 6 Use Vantagepoint to support a standard project close-out process that transforms a database into a true knowledge base that will help deliver better projects and improve profitability

These are just a few examples of the AMR's Lite approach to project control enhancements in Vantagepoint. Solutions can easily be tailored to specific client requirements – whether they are basic or complex additions.
